DESCRIPTION

The AVG7256R64E6800F0-AP is a Registered DDR2 SDRAM mini-DIMM module. This module is JEDEC Pinout compatible DDR2 SDRAM Registered mini-DIMM. The module has all the addresses and control signals buffered to reduce capacitive loading. The module utilizes a phase lock loop to reduce the capacitive loading on the clock signals and to synchronize all SDRAM input clocks with the system clock. A 256 byte serial EEPROM on board can be used to store module information such as timing, configuration, density, etc.

The AVG7256R64E6800F0-AP memory module is 2GByte and organized as 256MX72 ECC array using (9) 256MX8 DDR2 SDRAMs in lead-free FBGA packages.

The module PCB is fabricated using the latest technology design, six-layer printed circuit board substrate construction with low ESR decoupling capacitors on-board for high reliability and low noise.
